

# Rodent Control Tips

---

If you have any signs of rodent infestation, your next step would be to find, and eliminate their entrance into your home and/or yard.

**Start your investigation at the exterior of your home. You want to look for areas that provide food, harborage, and water. For example, wood piles, piles or stacks of refuse, shrubs, birdfeeders, crawl spaces, attics, cupboards, closets, and food storage areas. As for how they enter your home, watch areas around windows, door thresholds, utility lines, rooftops, and downspouts.**

# **Excluding Rodents from Your Yard**

**All rubbish piles and refuse need to be eliminated.**

**Landscaped areas need to be properly maintained with wood piles elevated off the ground.**

**Garbage totes and dumpsters should have tight fitting lids.**

**Rodents can live from the spilled and surplus food from bird feeders and pet food.**
